

The development of an electrical field equipment use in Lahti's Health Supervision unit

Health Inspector Sari Johnsson

City veterinarian Cecilia Blomgren

Nordic supervision Conference 7.2.2017

English translation: Health Inspector Merike Kamunen

LAHTI

How?

- The idea was born among our Health Inspectors
- Working method is intended to diversify the actual supervision work
- This project started only because we had our own interest and willingness to improve ourselves and our working methods
- We found a way to connect the tablet and our computer's software filestorage in cooperation with Lahti's ICT unit
- The tools we chose to use are Apple iPad Air 2 and Samsung Galaxy Tab S2

What?

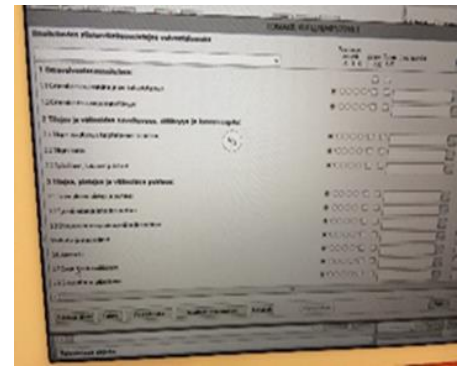

We came up with the idea in the early start of **2016**

January-March: First we started experimenting with a laptop

April-may: Soon it was obvious that the laptop was too clumsy and the ideal solution for our problems was a tablet

June-july: The experiment with the tablet was a success and soon all of our Health Inspectors, specialized with food supervision, started to use it

August-december: Now the tablet is used during Smiley Face-inspections. We are using the tablet to give better guidance for our clients and we also fill up the "Smiley Face" -form right away at the field

Light, easy to transport, excellent "device" to show videos, tips and photos

An opportunity to create new working methods

Office = Back Stage

Inspector/Computer

Background knowledge, advanced planning (Smiley Face-inspections) and other administrative work related to the inspections.

Workplace

Meetings, learning (law, other rules and practices) and projects etc.

Strengthening the knowledge of an individual and the whole group

Client's premises = Front Stage

Inspector/tablet

Inspections: filling up a Smiley Face-form, keeping law and instructions in mind.

Guidance: photos, videos and tips. Helping to fill up the In-House control plan.

**From inspector to educator =
You easily give guidance with more
practical language and methods**

Benefits

- The remarks written with the tablet will transfer to our general supervision software to your own computer
- The inspection history of a client is in use at the client's premises
- Using the tablet is an environmental friendly, because no paper is needed .
- Low cost tools and equipments.
- With the tablet we can educate ourselves more and give better and faster service for our clients.

Quality + quantity= effectiveness

Main goals

Continuos development

- Inventing more variations to use the tablet
- Plan is to create a whole storage of guides, photos and videos that are easily accessed at the field
- We have already made our own In-House control -form for clients and the purpose is to somehow combine these two ideas together
- Electrical devices are here to stay. So this method is meant to grow and blossom.
- Cooperation with Evira and other significant partners.
- We're going to make our knowledgement public!
